Antonín Svobodník

Data Evangelist · Cloud Data Architect
Prague, Czech Republic · tonykv@centrum.cz · +420 774 744 274

Profile

Cloud data architect who designs, explains and champions cloud data solutions in regulated enterprises. Works across Azure, GCP and AWS with Databricks, Microsoft Fabric and Snowflake; builds governed, migration-ready platforms based on Lakehouse, Data Mesh and event-driven architectures, and translates them into clear stories for business and technical audiences.

Key projects

European automotive manufacturer — Data Mesh domain: Vehicle Testing and Technical Development

Sep – Oct 2026 · Solution Data Architect · Azure Databricks, Delta Lake, Unity Catalog, ML, AI agents, Sparx EA

- Designed the solution for the vehicle testing and technical development data domain within the Data Mesh, including its data modernization.
- Defined the domain's data layers, data flows and processing patterns on Azure Databricks.
- Designed the integration of machine learning models and AI agents on Databricks into the domain's data products.
- Embedded governance into Unity Catalog: ownership, stewardship, classification, data quality and access control.
- Assessed the domain's legacy sources and defined the migration path, dependencies and risks to the target platform.
- Presented architecture options and decisions to business, engineering and management stakeholders.

European automotive manufacturer — Databricks Lakehouse and Data Mesh

Feb – Sep 2026 · Solution Data Architect · Azure Databricks, Delta Lake, Unity Catalog, ML, AI agents, Collibra (data catalog), Sparx EA

- Designed the target Lakehouse architecture: data layers, data flows and processing patterns on Azure Databricks.
- Designed the integration of machine learning models and AI agents on Databricks into the platform.
- Embedded governance into Unity Catalog: ownership, stewardship, classification, data quality and access control.
- Assessed the legacy estate and defined the migration path, dependencies and risks to the cloud-native target.
- Presented architecture options and decisions to business, engineering and management stakeholders.

Databricks Platform Architect

Azure	GCP	AWS
2025	2025	2026

2026 Knowledge Badge: Building Single-Agent Applications on Databricks

2025 Databricks Fundamentals accreditation

2025 PeopleCert ITIL 4 Foundation

Core expertise

Databricks Lakehouse
Unity Catalog, Delta Lake, medallion architecture, Delta Sharing, Asset Bundles

Architecture
Data Mesh, solution and enterprise architecture, Kimball, Inmon, Data Vault, migration strategy

Governance
Metadata-driven design, stewardship, classification, access control, Collibra, MS Purview

Cloud and tooling
Azure, MS Fabric, GCP, AWS, Snowflake, dbt, Power BI, Spark, Python, Sparx EA

Advocacy
Workshops, presales showcases, architecture decision records

Languages

Czech (native), English (professional), Italian, Russian

Key projects, continued

Swiss investment bank, Geneva — Microsoft Purview integration for data governance

Jul – Sep 2026 · Solution Data Architect · MS Purview

- Analyzed the bank's data governance for integration into Microsoft Purview.

Investment bank, Prague — Hybrid event-driven Data Mesh and governance

2025 – now · Solution / Data Architect, freelance · MS Fabric, DWH, Power BI, Tableau, Azure Data Factory, Azure DevOps, MS Purview

- Designed a hybrid data architecture combining event-driven and batch integration of the bank's source applications.
- Designed the Data Mesh: domain-oriented data products with clear ownership, a self-serve platform and federated governance.
- Migrated semantic models and visualization tools, Power BI and Tableau, to the new platform.
- Designed the data governance framework in Microsoft Purview.

Reproductive medicine clinic — Snowflake migration and metadata-driven data platform

2025 · Solution Architect, freelance · Snowflake, Azure, Databricks / MS Fabric, dbt, Power BI

- Architected metadata-driven integration of clinical and operational source systems.
- Led the data migration from Snowflake to the new platform, from a conceptual model of the clinic's domain to logical and physical models, with strict handling of sensitive health data under GDPR.
- Delivered governance and reporting foundations for management and clinical teams.

Vodafone Czech Republic — DWH and Big Data integration into GCP (Neuron)

2022 – 2025 · Senior Data Architect · GCP, AWS, Databricks, EDW, ETL, Terraform, Cloud Build, Sparx EA / ArchiMate

- Designed the integration of the enterprise DWH and Big Data platform (EDW + ETL) into GCP Neuron.
- Integrated production ML models into the platform: churn prediction, next-best-offer and propensity-to-buy, customer lifetime value, fraud detection and network anomaly detection.
- Integrated data sources from AWS and group projects within the local branch.
- Owned solution architecture in the Data Domain and documented it in Sparx EA / ArchiMate for audit and data governance.

KB (Komerční banka) — Data engineering

2020 – 2022 · Senior Data Engineer · Teradata, AWS, DevOps

- Improved system architecture and data models for robust processing on Teradata and AWS.
- Introduced DevOps practices for deployment and operations.

Banking and pharma DWH — Home Credit, KBC-ČSOB, Erste, MSD

2016 – 2020 · Senior Data Engineer, MDA Open Solutions · Oracle, PL/SQL, APEX

- Designed and implemented the Home Credit analytics datamart.
- Built the data migration system for KBC-ČSOB.

Career overview

2022 – now
Data / Solution Architect, freelance
Clients in automotive, banking, telco, healthcare, pharmacy

2020
Senior Data Architect
Ngena (telco reporting, Oracle APEX, CI/CD)

2013 – 2025
Data Architect, DWH
Marzotto SpA (textile; logistics, production planning) · Oracle, PL/SQL

2013 – 2016
IT Manager
Sametex s.r.o. (Marzotto group)

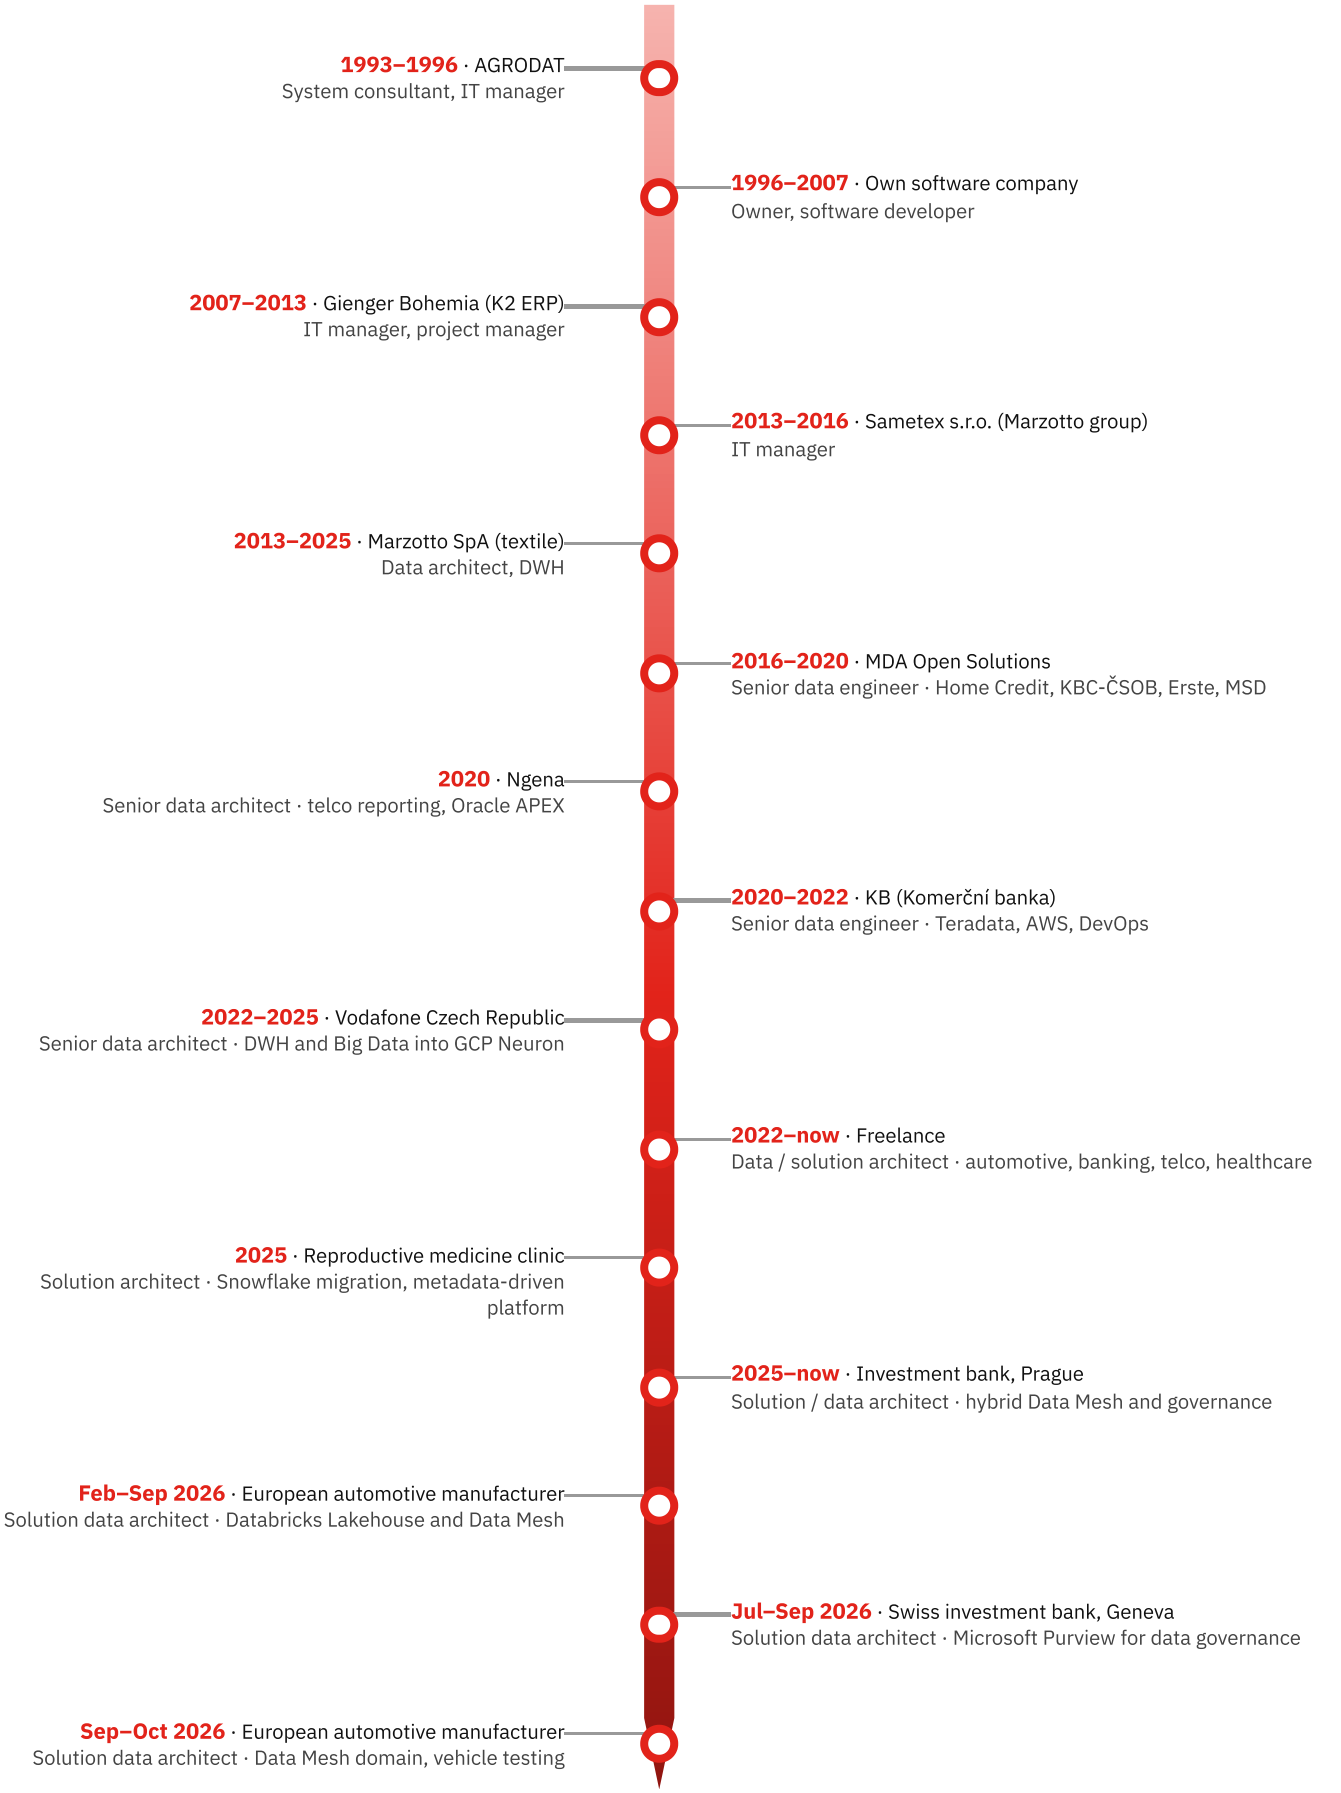

2007 – 2013
IT Manager, Project Manager
Gienger Bohemia / Gienger spol. s r.o. (K2 ERP)

1996 – 2007
Owner, software developer
Antonín Svobodník Software

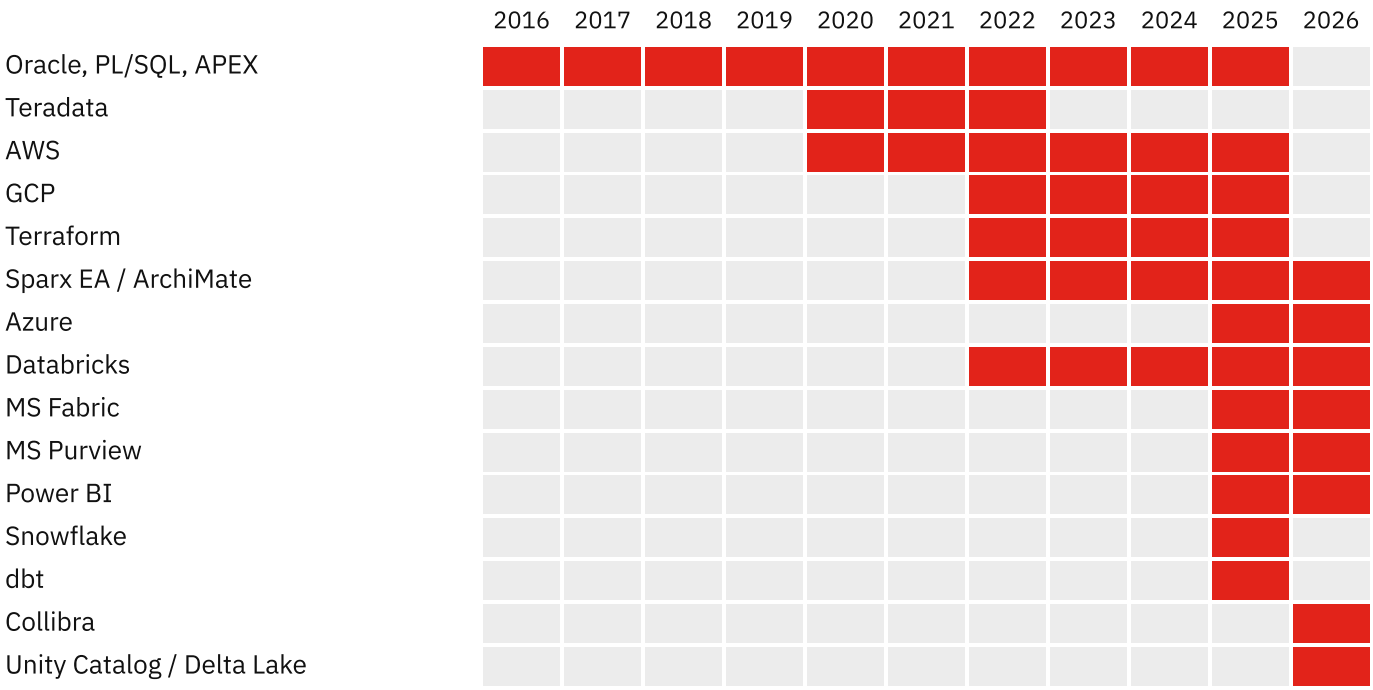

1993 – 1996
System Consultant, IT Manager
AGRODAT, Alma Nová Bystřice

Antonín Svobodník

Career timeline

Technologies by year

Approximate: based on the year-level dates in this CV. Each red cell is a year a technology appears in a project; a tool counts from its first to its last year.
