Profile

Cloud data architect who designs, explains and champions cloud data solutions in regulated enterprises.

Works across Azure, GCP and AWS with Databricks, Microsoft Fabric and Snowflake, and holds Databricks Platform Architect accreditations on all three clouds. Builds governed, migration-ready platforms based on Lakehouse, Data Mesh and event-driven architectures for automotive, banking, telco and healthcare clients — and turns architecture into clear stories through workshops, presales showcases and decision documents.

Core expertise

Databricks Lakehouse
Unity Catalog, Delta Lake, medallion architecture, Delta Sharing, Asset Bundles, single-agent apps

Architecture
Data Mesh, solution and enterprise architecture, data modeling (Kimball, Inmon, Data Vault), migration strategy

Governance
Metadata-driven design, ownership and stewardship, classification, access control, Collibra, MS Purview

Other data platforms
Analysis, assessment and migration design on GCP, Snowflake and Microsoft Fabric

Cloud and tooling
Azure, MS Fabric, GCP, AWS, dbt, Power BI, Spark, Python, Sparx EA / ArchiMate

Advocacy
Workshops, presales showcases, architecture decision records, stakeholder enablement

Experience

Sep – Oct 2026
Solution Data Architect

European automotive manufacturer — Data Mesh domain: Vehicle Testing and Technical Development

Azure Databricks, Delta Lake, Unity Catalog, ML, AI agents, Sparx EA

- Designed the solution for the vehicle testing and technical development data domain within the Data Mesh, including its data modernization.
- Defined the domain's data layers, data flows and processing patterns on Azure Databricks.
- Designed the integration of machine learning models and AI agents on Databricks into the domain's data products.
- Embedded governance into Unity Catalog: ownership, stewardship, classification, data quality and access control.
- Assessed the domain's legacy sources and defined the migration path, dependencies and risks to the target platform.
- Presented architecture options and decisions to business, engineering and management stakeholders.

Feb – Sep 2026
Solution Data Architect

European automotive manufacturer — Databricks Lakehouse and Data Mesh

Azure Databricks, Delta Lake, Unity Catalog, ML, AI agents, Collibra (data catalog), Sparx EA

- Designed the target Lakehouse architecture: data layers, data flows and processing patterns on Azure Databricks.
- Designed the integration of machine learning models and AI agents on Databricks into the platform.
- Embedded governance into Unity Catalog: ownership, stewardship, classification, data quality and access control.
- Assessed the legacy estate and defined the migration path, dependencies and risks to the cloud-native target.
- Presented architecture options and decisions to business, engineering and management stakeholders.

Jul – Sep 2026
Solution Data Architect

Swiss investment bank, Geneva — MS Purview for data governance

Analyzed the bank's data governance for integration into Microsoft Purview.

Antonín Svobodník

Data Evangelist · Czech (native), English (professional), Italian, Russian

2025 – now
Solution / Data Architect, freelance

Investment bank, Prague — Hybrid event-driven Data Mesh and governance

MS Fabric, DWH, Power BI, Tableau, Azure Data Factory, Azure DevOps, MS Purview

- Designed a hybrid data architecture combining event-driven and batch integration of the bank's source applications.
- Designed the Data Mesh: domain-oriented data products with clear ownership, a self-serve platform and federated governance.
- Migrated semantic models and visualization tools, Power BI and Tableau, to the new platform.
- Designed the data governance framework in Microsoft Purview.

2025
Solution Architect, freelance

Reproductive medicine clinic — Snowflake migration and metadata-driven data platform

Snowflake, Azure, Databricks / MS Fabric, dbt, Power BI

- Architected metadata-driven integration of clinical and operational source systems.
- Led the data migration from Snowflake to the new platform, from a conceptual model of the clinic's domain to logical and physical models, with strict handling of sensitive health data under GDPR.
- Delivered governance and reporting foundations for management and clinical teams.

2022 – 2025
Senior Data Architect

Vodafone Czech Republic — DWH and Big Data integration into GCP (Neuron)

GCP, AWS, Databricks, EDW, ETL, Terraform, Cloud Build, Sparx EA / ArchiMate

- Designed the integration of the enterprise DWH and Big Data platform (EDW + ETL) into GCP Neuron.
- Integrated production ML models into the platform: churn prediction, next-best-offer and propensity-to-buy, customer lifetime value, fraud detection and network anomaly detection.
- Integrated data sources from AWS and group projects within the local branch.
- Owned solution architecture in the Data Domain and documented it in Sparx EA / ArchiMate for audit and data governance.

Earlier projects

2020 – 2022 · Senior Data Engineer

KB (Komerční banka) — Data engineering

Teradata, AWS, DevOps

Improved system architecture and data models for robust processing on Teradata and AWS; introduced DevOps practices for deployment and operations.

2016 – 2020 · Senior Data Engineer, MDA Open Solutions

Banking and pharma DWH — Home Credit, KBC-ČSOB, Erste, MSD

Oracle, PL/SQL, APEX

Designed and implemented the Home Credit analytics datamart; built the data migration system for KBC-ČSOB.

Career overview

2022 – now	Data / Solution Architect, freelance	Automotive, banking, telco, healthcare, pharmacy clients
2020	Senior Data Architect	Ngena (telco reporting, Oracle APEX, CI/CD)
2013 – 2025	Data Architect, DWH	Marzotto SpA (textile logistics, planning) · Oracle, PL/SQL
2013 – 2016	IT Manager	Sametex s.r.o. (Marzotto group)
2007 – 2013	IT Manager, Project Manager	Gienger Bohemia / Gienger s r.o. (K2 ERP)
1996 – 2007	Owner, software developer	Antonín Svobodník Software
1993 – 1996	System Consultant, IT Manager	AGRODAT, Alma Nová Bystřice

Certifications

- **2026** Databricks Platform Architect accreditation — AWS
- **2025** Databricks Platform Architect accreditation — Azure, GCP
- **2026** Databricks Knowledge Badge: Building Single-Agent Applications
- **2025** Databricks Fundamentals accreditation
- **2025** PeopleCert ITIL 4 Foundation
